

Mohammed Alaa Mohsen

PYTHON BACKEND DEVELOPER — DJANGO & DRF

AI-augmented full-stack delivery

dev.albasha@gmail.com · +972 59 435 9293 · Gaza, Palestine

github.com/MohammedAMohsen · linkedin.com/in/mohammed-alaa-mohsen · mohammedamohsen.github.io

Backend developer with 3+ years of Python experience (Google-certified), specializing in Django REST Framework — API design, ORM optimization, and authentication systems. Ships complete, deployment-ready products by pairing that backend depth with AI-augmented frontend delivery. B.Sc. Computer Science, 2025 — seven self-directed projects, including a full-stack social platform built around a 7-app API and deployed to production.

SKILLS

BACKEND & APIS

Django Django REST Framework RESTful API Design OpenAPI / Swagger Celery Redis Transactional Email (SMTP) Query Optimization

AUTH & DATA

JWT / OAuth 2.0 Djoser PostgreSQL MySQL SQLite

API CRAFT

Filtering & Search Custom Permissions Pagination Caching Strategies Query Profiling (Silk)

DELIVERY

Git React / TypeScript Linux Nginx systemd Docker — in training

PROJECTS

StoryHub FLAGSHIP LIVE Social blogging platform — storyhubapp.com

- Built a polymorphic like system on one GenericForeignKey schema serving both stories and comments, instead of duplicating the feature per type.
- Replaced per-object interaction checks with Exists/OuterRef annotations, resolving each feed request in one query instead of one-per-item.
- Deployed to a production VPS — Nginx, systemd, PostgreSQL, automated off-site backups with a tested restore — with server-rendered SEO for real discoverability.

Stack: Django 6 · DRF · SimpleJWT · Celery · Redis · PostgreSQL · React 19 · TypeScript

GreatCart E-commerce platform — server-rendered Django

- Designed the full order lifecycle — stock validated before payment, decremented after, duplicate-payment protection, emailed HTML invoices.
- Built guest-to-user cart merging that reconciles sessions by exact product variation rather than product alone.

Stack: Django 6 · Pillow · SQLite · SMTP

ADDITIONAL PROJECTS

DRF_Core — reference API implementing all four DRF view tiers and three documented caching strategies. **djoser_advanced** — authentication service with a from-scratch email-change flow and a global exception handler. **Djoser_SimpleApp** — JWT auth product with silent token refresh. **StudyRooms & Blog** — Django fundamentals, custom mixins, multi-field search.
